Aishwarya Srivastava

srivastvaish126@gmail.com | USA | LinkedIn | GitHub

Summary

A strong foundation in Business Operations Analysis, Process Optimization, and Data Analytics, built **through 5+ years of experience** improving enterprise workflows and operational performance. Skilled in Python, SQL, automation, KPI reporting, and stakeholder coordination. Proficient in requirements analysis, service delivery monitoring, data integration, and performance evaluation. Experienced in translating operational insights into actionable recommendations, strengthening cross-functional collaboration, streamlining reporting, and supporting evidence-based decisions through continuous improvement across enterprise business environments.

Technical Skills

- **Business Operations & Process Management**: Operations Analysis, Business Process Improvement, Workflow Optimization, Operational Excellence, Requirements Gathering, Stakeholder Management, Cross-Functional Coordination, Sales Operations, Process Standardization, Root Cause Analysis, Exception Management, Process Documentation, Continuous Improvement, Operational Handoffs, Strategic Planning.
- **Data Analytics & BI**: Python, SQL, R, Pandas, EDA, Statistical Modeling, Regression Analysis, Logistic Regression, Hypothesis Testing, A/B Testing, KPI Reporting, Data Visualization, Trend Analysis, Performance Dashboards, Decision Analytics, Business Reporting, Operational Forecasting.
- **Service Delivery & Enterprise Operations**: SLA Compliance, Incident Management, Service Performance Monitoring, Operational Risk Assessment, Issue Tracking, Customer Requirements Analysis, Proof of Concept (PoC) Coordination, Deployment Tracking, Data Quality Validation, Pipeline Reliability, Production Troubleshooting, System Performance Analysis, Technical Log Analysis, Service Delivery Management.
- **Automation, Enterprise Systems & AI Technologies**: ETL Pipelines, REST APIs, Python Scripting, SQL Query Optimization, Data Integration, Data Transformation, Docker, Kubernetes, Salesforce API, OpenAI API, LangGraph, RAG, Multi-Agent Systems, AI Workflow Orchestration.

Professional Experience

Business Operations Analyst, Rubrik — 04/2026 – Present | TX, USA

Project: Enterprise Business Operations, Process Improvement & Sales Operations Analytics

- Analyzed customer requirements gathered across 20+ calls and 8+ industries, organizing recurring operational challenges into structured business insights that supported strategic sales planning, internal coordination, and more consistent enterprise solution evaluation processes.
- Coordinated proof of concept activities across customer environments, tracking deployment progress, technical blockers, and stakeholder feedback while maintaining clear status updates to support timely business decisions and smoother execution across functional teams.
- Developed structured reporting summaries from customer discussions, solution validation results, and technical issue logs, highlighting emerging trends, process gaps, and follow up actions for sales engineering and business operations stakeholders to review.
- Partnered with engineering and sales operations teams to document business workflow requirements, clarify ownership of open issues, and standardize communication between internal contributors, supporting more organized customer engagements and operational handoffs.
- Reviewed solution demonstration outcomes and deployment troubleshooting notes to find recurring customer needs, prioritize operational improvement openings, and translate technical findings into recommendations for strategic operational planning and cross functional discussions.

Business Operations Analyst, Accenture — 04/2023 – 12/2024 | Bengaluru, India

Project: Service Delivery Operations – Process Automation, SLA Analytics & Business Performance Improvement

- Evaluated recurring operational bottlenecks using process execution data and Python scripts, identifying automation opportunities that improved workflow processing speed by 40% while supporting consistent business operations across enterprise service functions.
- Automated repetitive data processing and routine administrative activities through Python and REST API integrations, eliminating over 20 hours of manual work weekly and increasing operational efficiency across recurring business activities.
- Assessed service delivery performance through application monitoring, incident trends, and SLA compliance analysis, identifying recurring system failures and coordinating corrective measures that reduced service level violations by 18% across production operations.
- Standardized operational procedures by documenting automation workflows, exception handling practices, and performance monitoring requirements, enabling business teams to maintain consistent execution, identify recurring inefficiencies, and strengthen process governance across enterprise service environments.

Business Operations Analyst, DXC Technology — 01/2020 – 03/2023 | Bengaluru, India

Project: Enterprise IT Operations Analytics – Data Integration, Performance Reporting & Operational Reliability

- Consolidated enterprise operational data using Python, SQL, and ETL pipelines, integrating information from multiple business systems to improve reporting consistency, strengthen data accessibility, and support accurate performance analysis across IT service functions.
- Enhanced operational data reliability by examining pipeline performance, validating data transformations, and resolving recurring processing issues, improving pipeline stability by 35% while supporting consistent reporting and downstream business analysis across enterprise systems.
- Investigated recurring data processing failures through SQL analysis, application logs, and systematic issue tracking, identifying underlying causes and implementing corrective measures that reduced pipeline failures by 24% across business reporting workflows.
- Facilitated operational data integration across enterprise platforms using REST APIs and optimized SQL queries, improving information consistency, resolving reporting discrepancies, and enabling reliable data exchange between interconnected business applications and reporting systems.
- Analyzed operational reporting requirements and system performance trends, developing SQL-based data summaries and exception reports to identify information gaps, support management reviews, and strengthen decision-making across enterprise IT operations and business functions.

Projects

SE Copilot – Enterprise AI Agent for Sales Engineering: Built and deployed a production-grade multi-agent AI system using Python, LangGraph, OpenAI, RAG, and Salesforce API, automating account research, technical call preparation, follow-ups, and source-grounded enterprise workflows.

Clinical/Patient Outcomes Data Analysis: Analyzed public clinical data using R, statistical modeling, regression, hypothesis testing, and exploratory analysis to identify significant patterns, evaluate patient outcomes, and derive evidence-based insights from healthcare datasets.

Billionaire & Education Impact Analysis: Analyzed 2,600+ global profiles using Python, Pandas, logistic regression, hypothesis testing, and A/B testing to evaluate relationships between educational attainment, financial outcomes, and statistically significant socioeconomic patterns.

Education

Arizona State University, Tempe, Arizona, USA
Master of Science in Data Science and Analytics (Computing and Decision Analytics) | GPA: 4.00 — 01/2025 – 01/2027

Dr. B.C. Roy Engineering College (Maulana Abul Kalam Azad University of Technology), Durgapur, West Bengal, India
Bachelor of Technology in Computer Science and Engineering | GPA: 3.50 — 08/2016 – 06/2020
